Art Unit: 2665

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
3. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over JAEGER in U.S. Patent No. 5,148,383 in view of TAKAHASHI et al. in U.S. Patent No. 5,809,039.

Referring to claim 21, JAEGER discloses a differential encoder comprising an EXOR circuit (30) and a D-type flip-flop (34) as claimed. JAEGER differs from claim 21 in that it does not teach a specific D-type flip-flop formed by a master latch and a slave latch. However, the use of specific D-type flip-flop formed by a master latch and a slave latch is well known in the art and commonly applied in communications field for providing the feedback control.

TAKAHASHI et al., for example, from the similar field of endeavor, discloses a specific D-type flip-flop formed by a master latch and a slave latch for providing the feedback control to shorten the internal time delay (col. 4, line 53 to col. 5, line 13) as claimed. Therefore, it would have been obvious to a person with ordinary skill in the art at the time of the invention to incorporate

Art Unit: 2665

the specific D-type flip-flop formed by a master latch and a slave latch in TAKAHASHI et al. into the differential encoder of JAEGER to achieve the advantage of shortening the internal delay time for the purpose of improving the speed and efficiency of the encoding device.

4. Claims 1, 3-20, 22 and 23 are allowed.
